Case 1 · Freshroots Operations — Components Map

Mandate: live in 90 days, within ₹15 lakh, with 3 IT staff and 1 analyst. No AI team: SAP exports and written rules.

1 Demand planning

₹28–34L a quarter in stockouts and write-offs

Bottleneck: monthly SAP-to-Excel cycle, data 3–4 weeks old

Fix: twice-weekly rules engine, review only exceptions

2 Distributor service

₹18–25L a year for every distributor lost

Bottleneck: WhatsApp only, no data, after-hours queries wait

Fix: query log, 2-hour reply clock, handoff, auto-reply

3 Operations intelligence

₹9L write-off from one late signal

Bottleneck: weekly report, nobody owns a mid-week move

Fix: one owner per metric, alerts with deadlines, escalation

Actor	Trigger	Input	Context	Processing	AI / Rules	Output
Deepa (Head of Operations)						**Dashboard: needs action today** Escalations, problem → fix, Hindi / English
Team (Raghav · CS reps · owners)		**Uploads 3 CSVs; CS rep logs each query** SKUs, stock, sales; query category			*exceptions only*	*late → escalates* **Owner acts by deadline** Approve order, reply, acknowledge alert
SAP + WhatsApp (sources)	**Mon & Thu SAP export; a WhatsApp query arrives**					*approved quantities*
System (engine + alerts, Vercel)			**Data checks + signed-off rules** Min/max cover, festival months, owner per metric	**Cover per SKU, reply clock, order-drop check**	**Flags exceptions, routes each to one owner** Rules, no LLM	
Database (Neon Postgres)					**Runs, decisions, queries, alerts**	*live data*
Zoho Inventory (Procurement)						**Draft purchase orders** Approved quantities only
